ProQuant ANALYTICS

CREDIT SCORING · ONE-PAGE SUMMARY
Demo Client · Report date 11 November 2026

Demonstration. Built from synthetic data.

Is the Retail Personal Loan Scorecard ready to use?

Yes, with conditions.

It ranks borrowers well on later loans it never saw (Gini 0.44). At a cut-off of 555, 80% of applicants are approved, with a bad rate of 4.0% against 6.0% for all applicants. The conditions concern drift in the applications and the gap in approvals for one age group.

0.44
Gini on later loans

80%
approved at a cut-off of 555

4.0%
bad rate approved, down from 6.0%

Decisions needed

	DECISION	WHO	BY WHEN
1	Approve a cut-off of 555, with a refer band for the 12% just below	Credit committee	This meeting
2	Decide whether the approval gap for age_group = under 30 is justified, or adopt the alternative scorecard	Compliance	Before go-live
3	Find out why inquiries_6m has shifted in recent applications	Data owner	Before go-live
4	Run the scorecard next to the current process before it decides anything	Head of credit	Next three months

The evidence is in the report; the calculator scores one application; the scoring pack is ready for IT.
